Waters spider- Using a pallet jack to move pallets throughout the work floors.

ISS “damage land” Problem Solver- Damaged items are processed, inventory is deleted, restocked, and items are verified before being resold at a lower price.

PROJECTS

Capstone Project — Final

Creating a trivia quiz in which I had to use two APIs to execute fetches and that a user would’ve been given a question to reply and receive points for successfully answering. If the user replies incorrectly, the game and score will reset automatically. (Collaboration was done with this project.)

Choose Your Own Adventure-Assessment

Building a game wherein the user is asked which page they want to go to, then given a short paragraph to read before being asked another question about which page the user would want to go to next, then their story will appear on the browser as a conclusion to their adventure.(Collaboration was done with this project.)

Portfolio- Resume

My portfolio is a visual representation of my work utilizing HTML, CSS, and JavaScript.
